

21st

INTERNATIONAL SURVEYORS' CONGRESS

"Surveying The Future"

In conjunction with

**United Nations International Seminar on
"Integrated Geospatial Information Framework"**

20th - 21st June 2019
Hotel Istana, Kuala Lumpur

GUEST-OF-HONOUR

YB Dr. XAVIER JAYAKUMAR

Minister of Water, Land and Natural Resources of Malaysia

Endorsed by

"Global issues and challenges in the 21st century are different from the past that we should always 'Survey the Future' to spot the trends by continually monitoring internal and external events so that timely responses can be made"

The 21st International Surveyor's Congress is proud to incorporate the United Nations International Seminar on **"Integrated Geospatial Information Framework"**. This event will play host to distinguished international speakers to discuss current and future trends as well as the role surveyors of all disciplines and other professionals will play with the management, collection, utility and security of geospatial information.

The Integrated Geospatial Information Framework is a United Nations endorsed framework, developed in collaboration with the World Bank. It will be the infrastructure nations will utilise in the development and management of geospatial information resources with far reaching applications in sectors ranging from sustainable and economic development, retail, tourism, city planning, smart society and even national security.

"Geospatial information" defines that all collective data and associated technology have a geographical component. It reflects the physical world in which all human economic and environmental activities takes place, and provides the digital version of our world, without which a digital economy is not possible. The 21st International Surveyor's Congress will address the many challenges and opportunities of a geospatial information framework.

The take away from the **First Day of the 21st ISC** will be the considerable awareness and understanding of the vital and integrative role of geospatial information. Such knowledge is necessary for surveyors and other professionals to embrace the digital transformation and value-add to professional services in order to spark and shape meaningful changes in geospatial industry and help better the world.

The **Second Day of the 21st ISC** will be parallel technical sessions for Property Surveying, Quantity Surveying, Building Surveying and Geomatics & Land Surveying. All participants are welcomed to attend these technical sessions of the four surveying divisions.
